Offshore wind farm – Belgium

The Belwind II is an offshore wind farm with an installed capacity of 165MW to be constructed on the Bligh bank approximately 45 km north off the Belgian Coast. The project will consist of 50 turbines; together with inter-array cabling, an export cable and an offshore substation.

GIEK is currently carrying out an assessment of the project against relevant laws and regulations as well as evaluation the project against the OECD Common Approaches on environmental and social due diligence.
